

Deep Learning: Day 1

chyld @ galvanize

Topics

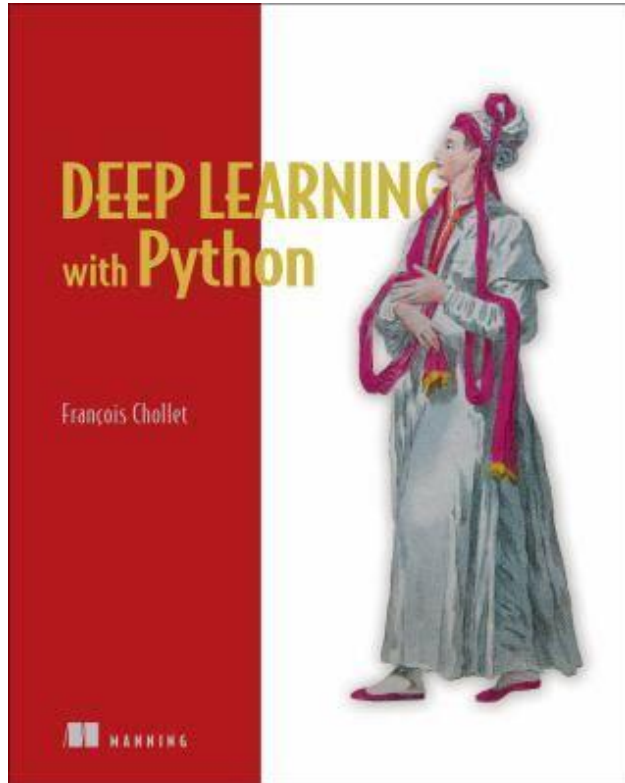

— — —

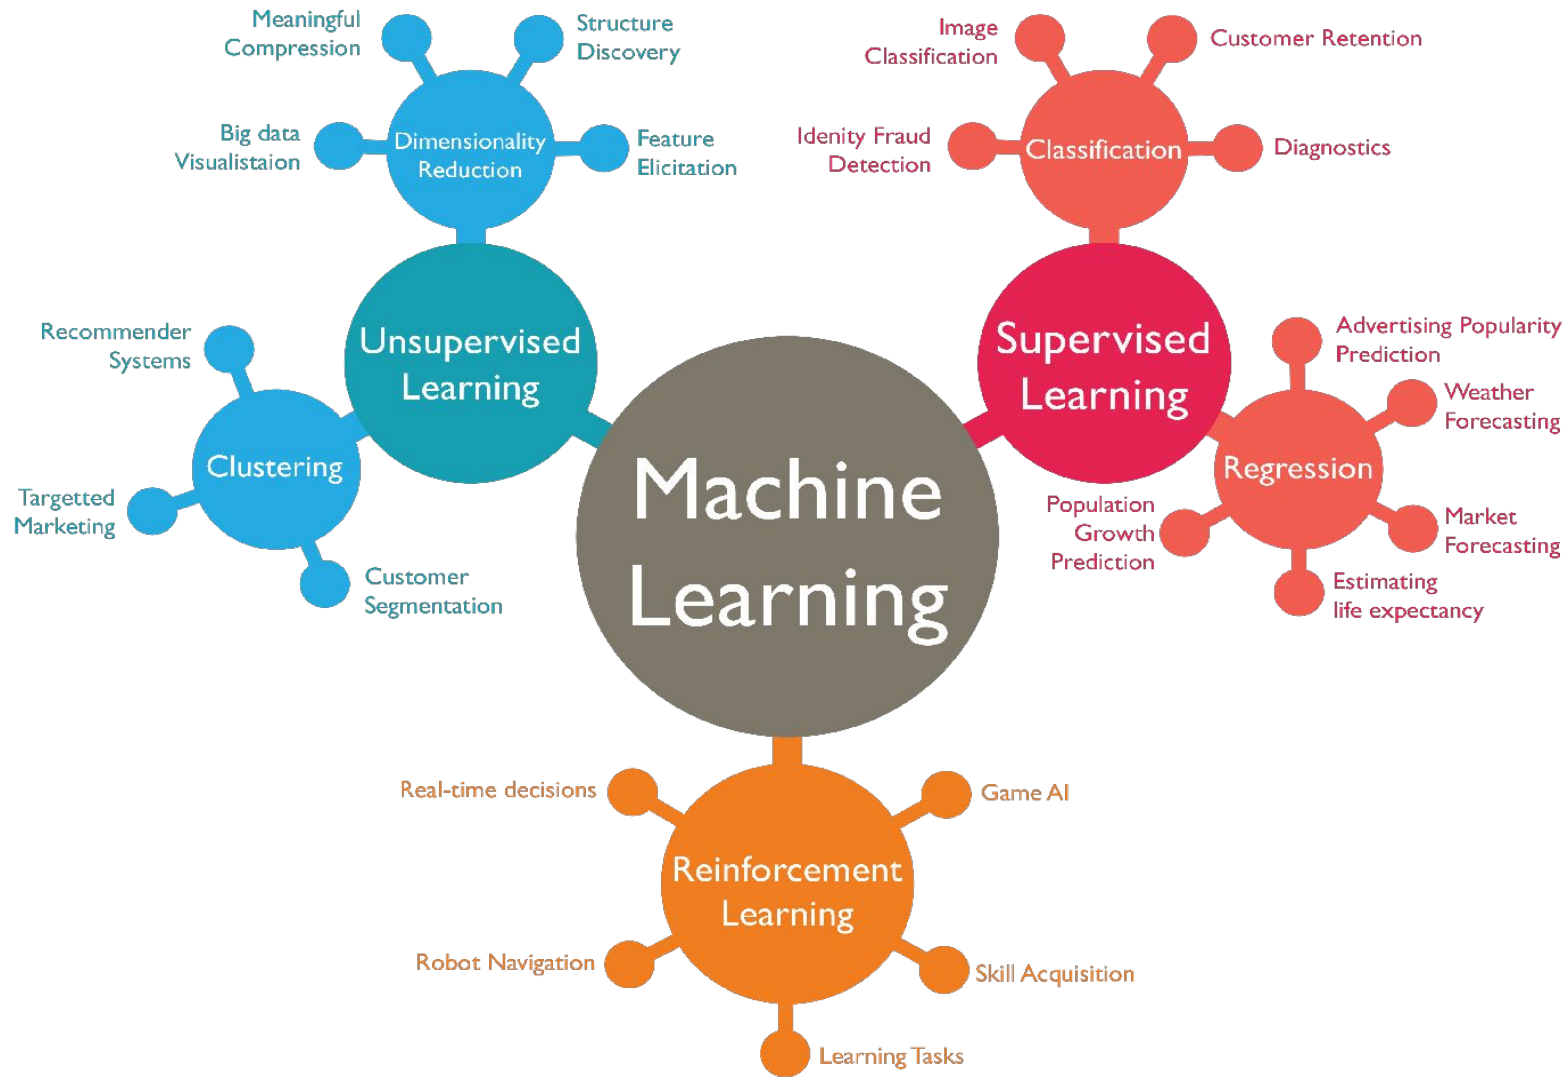

- Join Slack & Github
- Deep Learning Book
- Machine Learning
- Supervised vs Unsupervised
- Mathematics
- High Level Deep Learning
- Laptop Preparation
- Build Single Perceptron (Regression)
- Build Multilayer Perceptron (Regression)
- Keras and Tensorflow
- Simple Linear Regression with Keras

Deep Learning Book

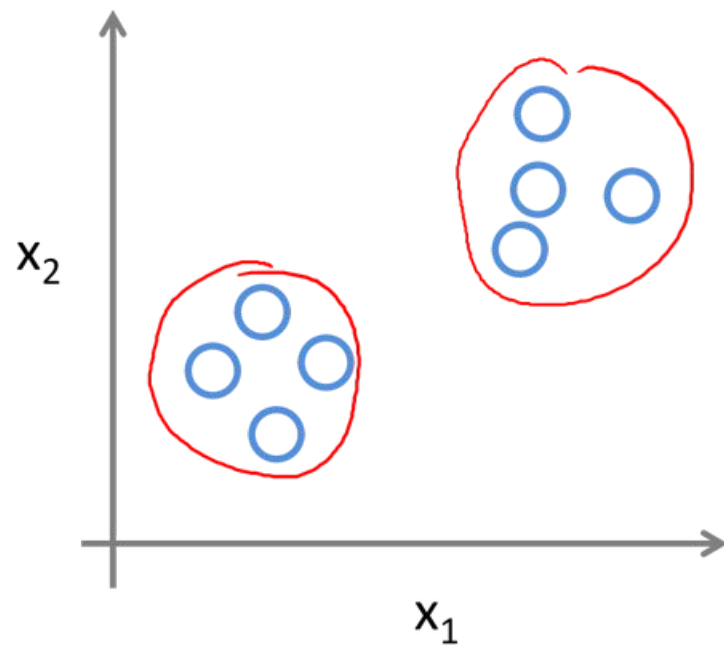

Supervised Learning

Unsupervised Learning

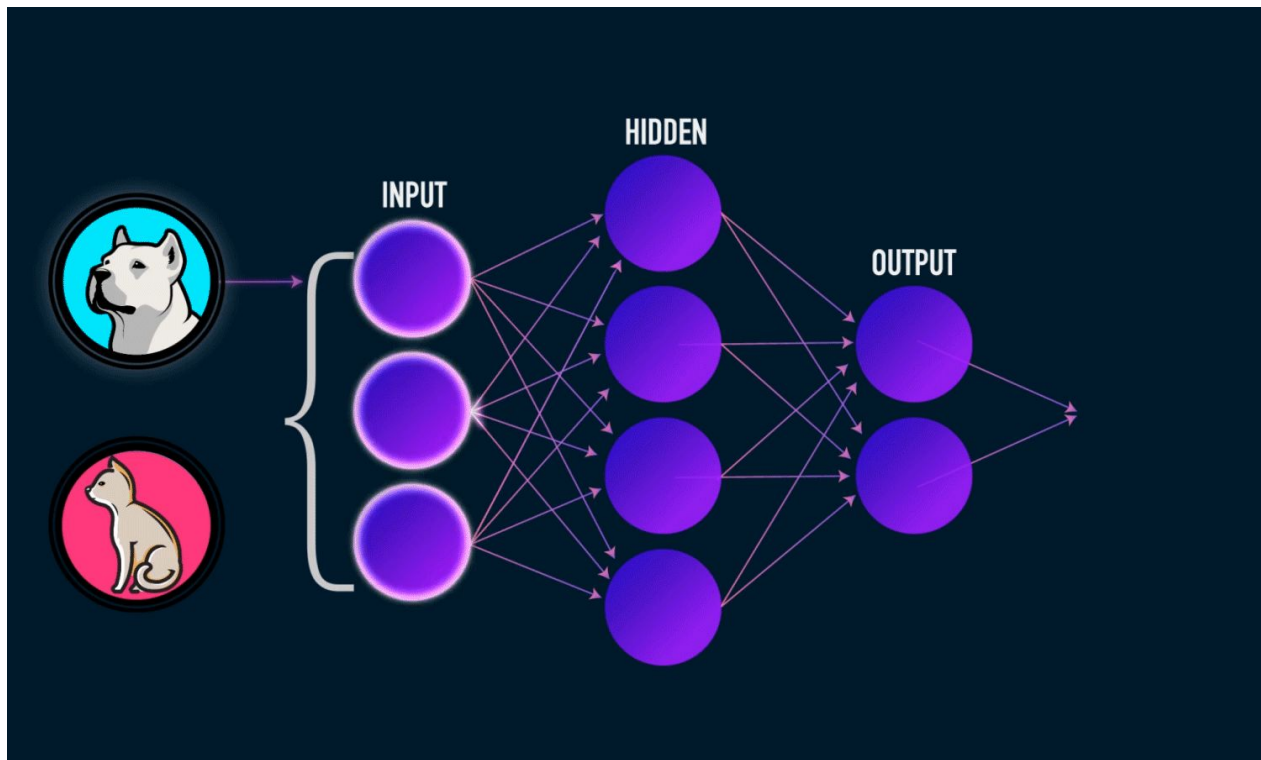

Mathematics

— — —

- Algebra
 - Solving polynomial equations
- Linear Algebra
 - Scalars
 - Vectors
 - Matrices
 - Tensors
- Calculus
 - Derivatives
 - Partial Derivatives

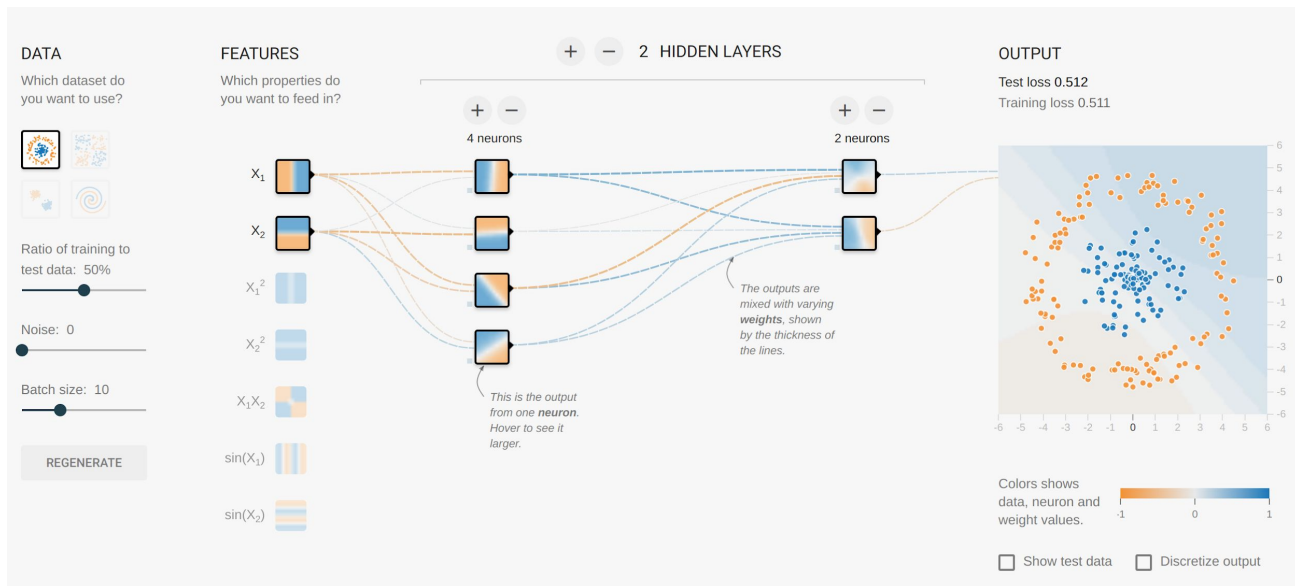

High Level Deep Learning

— — —

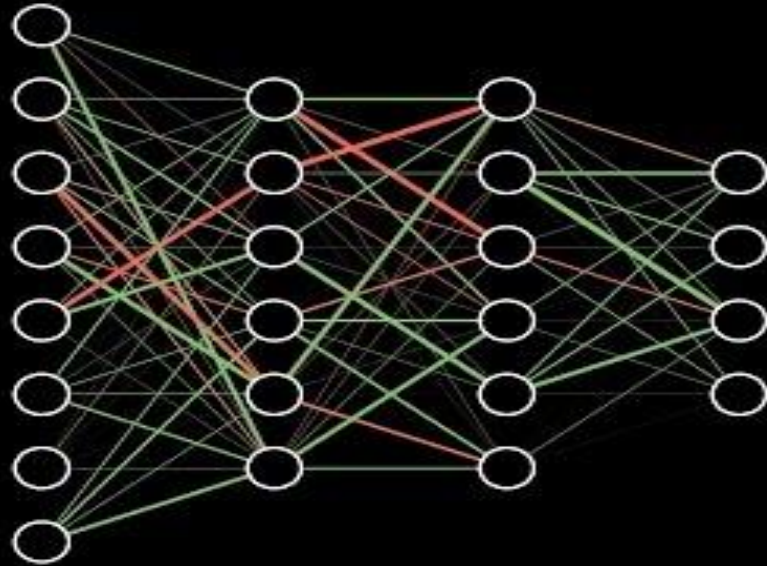

High Level Deep Learning

- <https://playground.tensorflow.org/>

A diagram of a neural network with four layers of nodes. The first layer has 8 nodes, the second has 4, the third has 4, and the fourth has 4. Connections are shown between layers, with some highlighted in red and green.

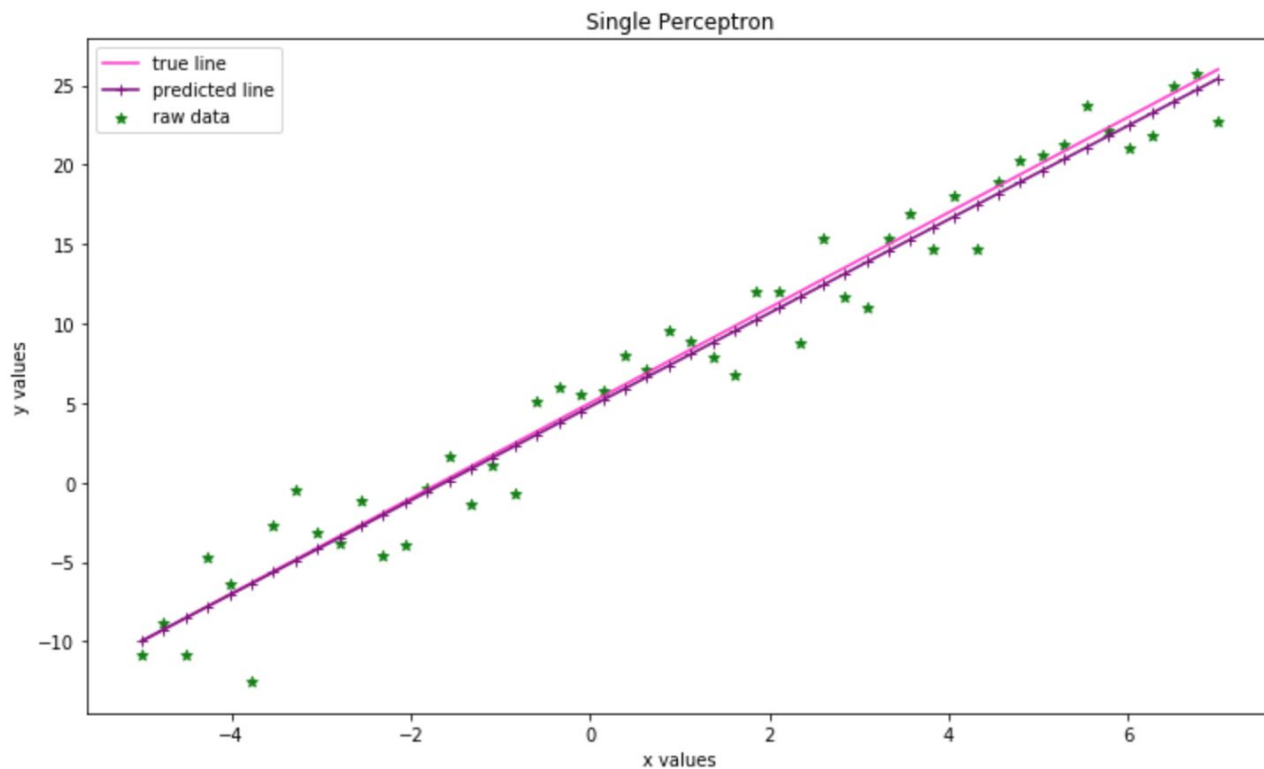

Laptop Preparation

— — —

- Laptop
 - Preferably Mac or Linux
 - Windows with a Linux Virtual Machine
 - Windows 10 with Bash
- Python 3.6
 - <https://conda.io/miniconda.html>
 - `conda install numpy pandas matplotlib jupyter jupyterlab`
- Code editor
 - <https://code.visualstudio.com/>
- Terminal
 - <https://hyper.is/>

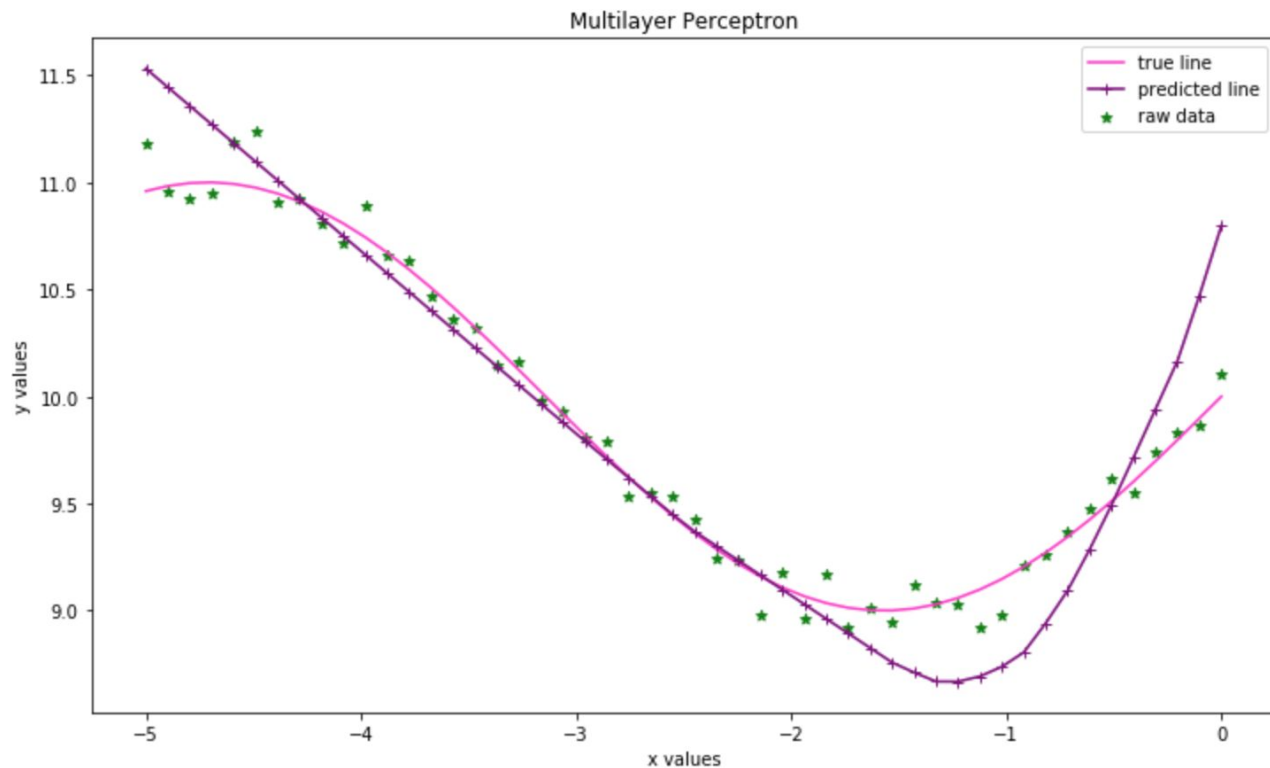

Build Single Perceptron (Regression)

-- -- --

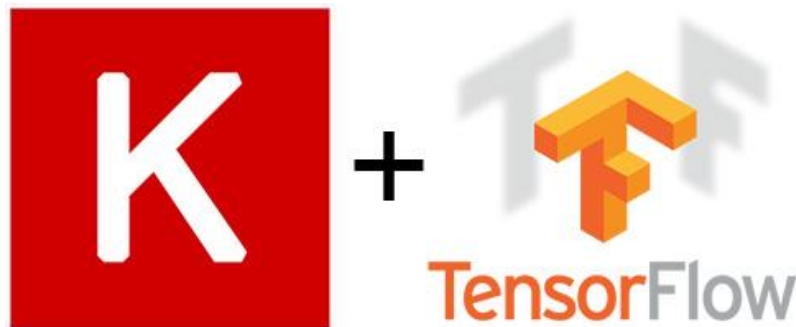

Build Multilayer Perceptron (Regression)

-- -- --

Keras and Tensorflow

- <https://www.tensorflow.org/>
- An open source machine learning framework for everyone
- <https://keras.io/>
- Keras is a high-level neural networks API, written in Python and capable of running on top of TensorFlow, CNTK, or Theano. It was developed with a focus on enabling fast experimentation.

Simple Linear Regression with Keras
